Abstract

Twin birth, a probabilistic family development, is a kind of aberrations in gender development in human biology, bringing grim or plausible situation. Although its occurrence is low, it induces a pondering situation, which might give some unknown facts of likely future developments in the family ie about likely loss of legacy in family. This study presents new facts of losses of legacies in family which create many disadvantages and setbacks. Case studies were brought to substantiate this biological process of gynecological concern. Such likely setbacks and disadvantages can be prevented by previously innovative advancements of bringing prismatic gender balancing, which stands as an innovative solution for ameliorating difficult setbacks arising due to twin births. The new innovative advances on human biology of facts based advancement in medical sciences of gynecological concern, broadening scope of prismatic gender balancing, becomes a protective medical measure. Survival of legacies keeps inspiring and advancing science and technology for the posterity.

Keywords: Aberration in expected results of gender theory, Food is medicine, Legacy losses, Prismatic gender balancing and social customs and family dynamics.

Introduction

Human population developed on random process. This situations induced different believes and adoption of some consolation supreme power under different names and religions. This context is very broad, which is beyond the scope of the present study, Primary concern in the present study was on the human biology on twin births.

The twin birth is a kind of gender development aberration, which is accepted with applaud and pleasure, although it create some hardships for life time for their selves and bringing extra burden on the parents. There seems to be unconcern for futures of such twin births, in general, due to lack of knowledge. Human geneticists might be aware of such development in development of twin fetus simultaneously on a specific situation. Both babies grow and share nutri-

ents from the mother's body, which can be met with medical cares. The most important is the supply of oxygen requirement for twin babies conceiving mother's gets to three times as against twice that happen in the single child conception. The mother's energy loss is almost twice the loss with single child birth. Leaving aside the situation in the mother's womb, the post birth care is still more involving and demanding. If and by chance it needs cesarean delivery, the care of mother and two children add to tremendous task for the family. As time passes the situation gets normalized and people forget the trouble and the agonies which become a past memory. Objective of present study was to reduce the information lack gap to be able to ameliorate the likely setbacks associated to twin births.

Materials and Method

Developing atrocities on towards women and girls

The generations have grown in random process which constituted the human biology. The alighted minds made some ideological customs, which made provocation of customs. The customs became eccentric due to natural stinks with limitations. The weakest women and ladies suffered the maximum harms of atrocities. *Savitribai Phule* [1] was known to launch campaigns to reduce or eliminates such atrocities on women and girl children.

Development of believes on God's will.

Prevalence of Darwin theory in human gender made detraction of developing other scientific development, which lead people believe mythology rendering week situations for not bringing empowerment of women and girls.

What is loss in legacies?

The male dominance made customs of moving girls to the

groom's house. The male's family legacies get revamped, but when only female child moving to other house the parental legacies come to an end. This kind of disadvantage or any earned fame or proprietorship get vanished. This situation clarifies the loss of legacy, which will be appearing as a main focus in the present study.

Development of twin births in India

In India the overall twin birth rate is around 9 per 1000 births. However, certain regions like *Kodinahi* in *Kerala* and *Sirkazi* in *Tamilnadu* have reported significantly higher twin birth rates, with *Kodinahi* have staggering 45 per 1000 births. Although *Jalandhar's* twin birth rate explicitly mentioned, it is possible that factors like diet, life style or genetic predisposition might be at play. Some experts suggest that certain ingredients in local diet or environmental factors could be contributing to this high twin birth rates. It is also worth noting that India's high birth rate is influenced by early marriage, preference for male children and limited access to family planning education.

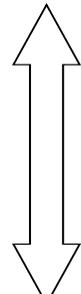

S.no	Location	Country	Twin gender	Specific problem	Staple Food	Situation
1	Jalandhar, Punjab	India	Boys	Legacy	Wheat	P o n d e r i n g 
2	Kodinhi, Kerala	India	Girls	Legacy		
3	Sirkazi, Tamil Nadu	India	Girls	Legacy	Rice	
4	Phillipine	Phillipin	Girls	Multiple marriage	Rice	
5	Indonesia	Indonesia	Girls	Multiple marriage	Rice	
6	Nigeria	Nigeria	Girls	Multiple marriage	Rice	
7	Brazil	Brazil	Girls	Multiple marriage	Maize	
8	France	France	Girls	Multiple marriage	Not specific	

Table 1: Geospatial scenario of twin births

While searching on internet, many pictures were found high on girls. It implicated high twin birth rates of girls in the western countries. This twin girls births implicate lot of loss of legacies, particularly ancestral legacy.

The country India staking on one wife, suffers the problems of conservation of ancestral legacy. Such problems are not realized in western and other different fixing women members in multiple marriages. Some countries have altered law, but of proof of sharing ancestral property remains complicated. Other types of legacies get lost on line that happens in India. There gets loss of secondary natural resources and no advancement in science technology, which cannot get transferred to girls as they move to their husband's, house and adopt that legacy. This becomes new aspect of the twin births.

The discovery of gender theory

The scientific gender theory xx-xy(female and Male) gender theory got discovered by Williams and Stevens, in 1905 as reported by Singh 2016 [2]. This became a scientific base for

people to think in scientific justification. But there occurred lot of aberrations in the expected results from the theory, making people loose trust in the theory and staking their preference to earlier belief of god's grace in family development.

What is the Godly plausible prismatic gender balancing?

Deep study on aberrations of gender developments of well known cases to this researcher, were carried out that enabled find the exact factor which vitiated results from the scientific discovery [3,4]. This deep study brought a godly prismatic gender balancing, which proved highly successful. Such factors were perhaps, not thought over in the original discovery. It involved same course of natural developed process, that became a sound justifications [5,6] for its naming as Godly plausible gender balancing. The study brought new perfection of the original discover of the gender theory [7,8].

What had been the further advancements in the human biology post developments creation of the prismatic gender balancing?

The science of human biology was brought to bring a designer baby by choice and not by chance [8]. There has been lots of spiritualism in such endeavors brought as business in this field, which cannot get afforded by the most of the people. The advancement in human biology as further moved to bring decent personalities to be able to manage affairs appearing before any an exogenic factor based indulgement on one's growing life time. The study established factors responsible for building one acquire habit of becoming a bad personality. The study brought new genetic measures to overcome indiscriminate gun shooting in the United States of America and elsewhere [9,10].

How the legacies can be made ever surviving prismatic gender balancing

The gender development is randomly developing process. Further, female gender is sole creator which is although contributed by female and male, natural responsibility of carrying and nursing a child remains with female, which is applauded as motherhood. The girls have to move to the male's house as a custom. Any family having gender misbalance the ancestral legacy gets to an end. This had been a non maneuverable, when supported by the Darwin theory made developing attitude of staking on believes, which might vary in caste, religion and location. This has been happening. The prismatic gender balancing brought a Godly plausible solution by creating gender balanced family.

Wht is the twin birth?

The twin birth is a kind of aberrations in results of gender theory, which again get pulled by the random process. This study is not going to find out any scientific reason, which will involve deep knowledge of genetics. Thus, there can be several situations and types of twin births are the matter of gynecological concern. This study will bring detailed study and elaborations of knowledge, which had prevailed in very low probability and it lacks in knowledge on its impact. This study will bring a plausible and careful endeavor involving solutions for overcoming such disadvantages.

Acquisition of data on twin births

Being the aberrations it involved acquisition of knowledge about rare aberrations. This study could be able to have some cases and produce scientific knowledge about the likely such losses of the legacies. This study brought remedial measures for overcoming the bad impact of further development in the members of twin birth developing children.

Results

Twin birth associated problems

An internet survey conducted enabled developing the categories of twin births. Fig 1 shows the general five categories of the twins. These are: (A) both babies are boys, (B) babies are one boy and one girl (C) both babies are girls (D)

both babies are boys of different development and different in appearance viz dwarf and black and the last (E) is conjoined girls. These kinds of groups will cover all aspects on twin babies involving serious concern to be developed in the present study.

What can be possibly done to bring up different categories of the twins as brought in Fig 1.

Medical care will bring cures to conjoint babies and rear them to grow. Education, up keep will enable them to acquire good personality. With the growing ages there will be liability of finding suitable employment or acquire some sources of income for self support as well as cater need of family if it could be possible.

Category A

Both the boys will have equal opportunity to become hero with care

Category B

The group B comprising boy and girl will have good company and possibility of becoming decent personality. The category of twins will have a comfortable social life as both male and female will be supporting each other. There will be low chance of wandering indecent indulgements. This will be a normal situation in the development of decent personality.

Category C

The twin birth of girls will enable them develop in decent personalities. The burden of marriage will form worries for the parents. The family wealth situation will stand becoming support for developing such girls to acquire personality building skills.

Category D

The group D both boys although having some physical set back good care and up keep will enable them acquire personalities each near to group A twin boys. This will enable them acquire decent personality with some ember racing situations, which will be brought in developing part of the study.

Category E

The conjoined girl children when separated acquire physical ability to grow personality closer to that of girls in category C, the limitations will develop on the worrying situation, which will get enabled with prosperity of parents.

The genetic reality aspects of twin birth will be presented in the upcoming section of the study.

Genetic Socio-economic implications of twin births

The twin birth related complications appear about 20 years of age, when gender hormones secretions come inaction. This change involves attraction between males and females. Such complications make a very devastating consequence of development. The natural social problem is resorting on the marriages. As with twins the burden of marriage becomes

equally important and creating financial crunch of double expenses at one time. It will be difficult to find suitable match for to similar or different gender. Till this time the real complication of genetic set backs are generally apparent. This

study will bring such genetic disadvantages which become a new aspect of pondering providing depiction of problem that happens with the twin births.

(C)

(D)

(E)

Figure: 1 Groups of twin births of different types extracted from internet search
(A) Both are boys, (B) One boy and one girl, (C) both girls, (D) one boy black and other dwarf and (E) a conjoint both girls.

Loss of legacy associated with the genetic setback of twin births

The concept of loss of ancestral legacy was brought out in section 2.3. The twin birth aberrations are of low probability. There has been no specific study to have statistical data on its occurrences, as a result of no knowledge on the genetically setback brought as indicator in human biology. This fact supports the few apparent cases of twin births coming to

ones' knowledge. In the study the well known cases could be possible which are presented in Table 2. Category A having sets of three families. The family 1 in the category under A, the twin had sons in generation 2. But in the second generation this twin, got only girl child, implicating loss of the ancestral legacy. In the following case Family 2 the male of the twin had only one girl child, that also indicated loss of ancestral legacy. Coming

to the case of Family 3 one of the twin births had one son and one daughter. The second one of the twin had no issue or family had no children.

The category C with twin girls with developing decent personalities when move to her husband house adopt legacy of husbands parental legacy and her parental legacy get lost in due course of time. The categories D with genetic variation having both boys will keep legacy survive for longer than that with the girls. With the births of girls the ancestral legacy

will get lost as those could be obtained in category C. However, these four cases suffice covering entire case of likely developing twin births. In conclusion it can be summarized that when there occurs twin births in any family it is going to bring loss in ancestral legacy. This is a novel finding in advancing human biology. This new genetic fact makes the present study becoming wow information result producing on twin births. This fact becomes a new knowledge on human biology implicating ancestral legacy.

Family case	Family	Situation	Legacy 1	Legacy 2	Legacy 3	Overall
Category A Twin birth both males						
Family 1	Y1	Twin				
	Y11	Single				
	Y11X1	female	L	General	L	Loss of legacy
Family 2	Y1	Twin				
	Y1X1	Single	L	L	L	Loss of legacy
Family 3	Y1	Twin				
	Y1Y2					
	Y1		L		I	Loss of legacy
Category B L1 Male + 1 Female. Twin births						
Family 4	Y1	Thin				
	Y1Y1					
	Y1X2	L	L	L	L	Loss of legacy
Category C. Both girls						
Category D. Twin boys of different genetic or physical appearances						
	Y1C					
	Y1C2					
Category E Conjoined girls even after surgical separations						
	X2					Loss of legacy

L loss of respective legacy,

Table 2: Details of twin their developing descanters and situation of legacy

Remediation of loss of ancestral legacy loss by bringing balance in the developing family gender plausible solution becoming highly applicable for protecting loss in the parental legacy.

Authors studies referred at S. no [11-17] brought many advancements in ecosystem services and economy enabling acquire healthy longevity of life. Author's study [16] brought Godly plausible results of prismatic gender balancing. That technology will be very well applicable to bring gender balanced family that will enable survive legacy foreve. In this situations although there might be twin births but the loss of legacies will not happen. This Godly plausible family gender balancing is a solution for usually developing gender mis balance in the families. This innovation was adequately substantiated that with development of twin girls or boys there is

likely chance of loss of legacies. Hence, this wow innovation will also enable save conserve loss of legacies of family in all cases.

The information on country wide scenarios appearing in sub section 2.4 in Kerala and Tamilnadu need some operational project on bringing family gender balancing and within a year the likely benefit will appear. Thus, things of helplessness will turn to empowerment of women and girls on genetic principle in natural course of human demography development. The plausible gender balancing turned to develop a genetic Legacy Conservation Fasting (CONSLEGFAST) by both females and males, which will be observed post menstruation period for two days or so. There is emerging concepts in tourism on conceiving. Under such situation this Godly plausible gender balancing will enable bringing a confidence in developing

baby by choice and not by chance.

Summary of implications of the twin births

This article explored intriguing topic of twins, categorizing them in to five groups and delving in to the concept of legacies losses. Key aspects of the study are: 1. Legacy loss, whether inherited or earned. 2 Generational impact. The possible discussion points remains identity and individuality. Family dynamics parental influences or sibling rivalry, play in sharing of the twin's legacy and involvement of social and cultural factors. What psychological factors such as attachments, separations or the twin bonds might influence the twin attitude towards each other? There might be sharing and deprivation of mother's body resources, age, food and nutrition, comforts, family peace and human dealing in the family legacy. Genetically, there might exist similarity in appearance and thoughts and feeling, but may differ in acquiring intelligence capability.

Discussion

Bringing new knowledge in human biology

This research developed on human biology which has been causing situation beyond one control, bringing a total helplessness, making bear agonies of life of children as well as the parent's equally hard and difficult time. This is increasing worldly human development problem, although having varying implications on social genetic scenarios, but certainly causing no acquisition of secondary natural resources and lagging in advancing science and technology.

Twin birth cause depriving setback of sharing mother's womb and body resources

Developing situation of deprivation in sharing which happens in fetus development in twins during pregnancy brings biological setback on intelligence. Such deprivations cause some setback in the second child, having some physical or mental weakness depicted vide Fig 1 D, E. All such setbacks developing with helplessness become troublesome for both, the children as well as families. This study has brought a Godly solution to bring situation that will reduce such disadvantages.

This study becomes a repository on genetic knowledge on adverse impacts and developing disadvantages

This research article brought comprehensive information on twin births, coming with lot of setbacks in life for the developing children as well as for the parents. In addition, there occurs lot of setbacks as brought out with actual case study producing meaningful conclusions. Prismatic gender balancing will reduce occurrences and the wiping our loss in legacies of all kinds. Thus this study brings clearly visible advancements eliminating limitations get resolved to larger extent. Thus, this become a new knowledge on consequences of twin births, which otherwise was known.

Study eliminates helplessness and bringing empowerment in living life

The Godly plausible gender balancing will enable produce balance family that will bring all inherent advantages of multiple benefits, which enhance the conservation of legacy from likely loss brought out in Sub section 3.5. Thus this is a wow innovation for which there existed no foreseen solution

New fasting for conservation of ancestral legacy (CON-SLEG FASTING)

As brought out in authors study [16] a very well depicted widespread problems emerging in no birth, gender mis balance and unforeseen twin births, resolving all such problems of genetic facts by introducing an innovative genetic fasting. This will bring a fostering impact in bringing Godly plausible gender balancing. This fasting is highly scientific, meaningful and surpassing all kind of customary fasting in various religions.

Launching Operational Research Project on gender balancing and overcoming genetic aberrations

The study brought worldwide problem of twin births regions viz. in Brazil, France, India, Indonesia, Philippines and Nigeria. This is increasing with time causing lot of sufferings in life of parents as well as the children themselves. This knowledge on human development has reached to identify areas, problems and possible genetic solution. There is good scope to launch an operational research project on the novel cause on human biology. This is a new and real aspect of creating human welfare of the global perspective.

Conclusion

This study enabled acquisition of supplementing legendary fact of look back and think ahead, bringing the following conclusions:

- The twin birth is a kind of aberration in gender development in human biology and a wide spread severe problem in several countries of the world, on increasing trend, but suffers the lack of knowledge. Twin births occur with sufferings for self and bringing lot of hard time to their parents.
- This comprehensive study becomes a repository on twin births.
- The case study revealed that one of the twins suffer setback of ending by 1st or 2nd generation bringing lot of disadvantages of loss of legacies, be it ancestral or earned one.
- The twin aberration can be ameliorated by Godly plausible gender balancing presented here, which will overcome many disadvantages and recuperating to produce multiple benefits.
- This aberration brings severe consequences for Indians who go for one marriage with a wife as against not realizable in western or many countries, where gentleman has

different wife in the life times.

- There is ample opportunity of launching an operational research project on prismatic gender balancing overcoming such adverse impacts of aberrations.
